How to attach a Malice Clip®

Malice Clips® are a reusable, high strength, injection molded, connecting clips that are designed to attach modular pouches to modular vests, belts, packs, MOLLE or PALS equipment. They are not affected by heat or cold, and will never corrode or lose their subdued finish. Once attached they require a flat tipped object to unlock it. The clip will not open until it is disengaged by the user. To open a Malice Clip® you must unlock it by inserting a screw driver or other flat tipped object and lift the tab up to release clip. To properly attach a Malice Clip® you must follow the instructions below, when properly attached Malice Clips® are completely secure.

#1. Run the Malice Clip® under the first row of webbing.

#2. Weave the Malice Clip® back through the next webbing on the pouch.

#3. Weave the Malice Clip® back through the webbing on vest.

#4. Continue to weave the Malice Clip® until it is fully mounted.

#5. Snap the Malice Clip® shut once the pouch is woven completely onto the vest.

#6. The complete attachment should look as shown. For maximum security it should be woven completely.
